Nail it – AUTOMATED TESTING SOLUTION TRANSCENDING CUSTOMER EXPERIENCE

Despite rapid adoption in digital, enterprises are still struggling to validate their application agility to the best of their capability and are facing challenges in adopting the right approach to drive higher responsiveness to evolving business requirements.

It's primarily because of the high investment associated with procuring tool licensing and selection of 'Right' automation framework. CSS Corp has built '*Nail it*', an early validation solution that autonomously validates texts, provides thorough analysis, interpretations and suggests improvements to drive application quality by contextually leveraging AI, NLP and ML.
