

Geospatial (GIS) Services and Solutions

Unlock Business Value Through Insights with Geospatial Data

CSS Corp is a global geospatial player with a vision to provide innovation, unrivalled customer service and shared success for overcoming business challenges. We offer geospatial technology services to acquire and merge high-quality location or spatial data efficiently from multiple sources, allowing for easy access, geo-analytics, and utilization. Our services enable organizations to visualize spatial data, generate insights on spatial relationships from massive datasets, and simplify data management.

With our niche capabilities in GIS services, we are the trusted advisors for enterprises to chart and execute strategic roadmaps for their GIS projects — from conception, to execution, through completion. We have strong technical expertise on Esri and OSIssoft platforms for utilities and telecom verticals. We power our services with digital technologies like AI, automation and predictive analytics to give you enhanced business efficiencies and generate actionable insights to guide your strategic decisions.

Key Services

GIS Consulting and Assessment Services

Data Acquisition, Processing, Content Management
